Announcing a new
International Conference on Research into School Teaching and Learning with Whole Class Interactive Technologies

June 29th & 30th, 2009
Møller Conference Centre,
University of Cambridge, UK

The conference focuses on the pedagogy underlying use of innovative tools such as interactive whiteboards, visualisers, tablet PCs, remote input devices, voting systems, etc.

How does their use facilitate or constrain more effective teaching and learning and support ‘dialogic’ classroom interaction?

This event offers a unique opportunity to bring together pioneering researchers and practitioners – along with teacher educators and policymakers – in this young but rapidly evolving field. The aims are to share and debate ideas, work in progress, emerging theory and findings, and to compare practice in different countries.

Organisers: Sara Hennessy & Steve Kennewell

Please register your interest asap (places are limited) with the conference administrator (Bryony Heather: bsjh2@cam.ac.uk) to receive further updates (registration, programme, international Keynote Speakers)

See www.mollercentre.co.uk for details of our state-of-the-art conference venue with sumptuous meals and executive en-suite accommodation
Focus on Pedagogy for Whole Class Interactive Technologies

International Conference, Cambridge 2009
