

On Friday 14 March 2014 the Faculty took part in the University's Science Festival

During the day we welcomed 57 children aged 2 - 5 and 37 accompanying adults to the Faculty for a hands-on event called 'Making Friendshapes'. Children took part in lots of activities about shapes and patterns. Adults toured the Psychology Laboratory, signed up for research involvement and found out about the courses offered by the Faculty. Thank you to all staff and students who helped out with the event.

In the evening, staff, students and members of the public filled GS4 to hear Professor Christine Howe's talk entitled: 'When babies know so much about the physical world, why is school science so difficult?'. Questions were in abundance and the audience were thoroughly engaged with the topic.
