

Bill's student outcomes

Bill, course leader for PGCE, taught in two inner London Comprehensive schools between 1991 and 2000. Examples of students' work, who were taught by Bill and his colleagues, are given below:

A-level work; boat launcher, aluminium mountain bike with suspension system;

GCSE; lamp designs inspired by either Design Movements or flowers.

Bill, and his fellow colleagues, were always looking to push their students to reach their design potential. Furthermore, they were particularly interested in how they, as teachers, could help students to think more creatively when designing and making. This ability to think creatively has been a problem in D&T education for many years. Bill's success in teaching for Creativity, was one of the reasons The GATSBY Foundation asked Bill to research into this area in 2005.
